

MC 836

MC 837

Condenser Microphones

FEATURES

- Lobe/Cardioid polar pattern (MC 836)
- Lobe polar pattern (MC 837)
- Very wide frequency response
- Low frequency roll-off switch
- Phantom power supply 11 - 52 volts

APPLICATIONS

The rugged and lightweight MC 836 and MC 837 shotgun microphones have been designed to meet the demands of ENG and EFP applications. Due to their acoustical characteristics they are also suited for studio, film and theatre applications. The directional polar pattern helps to suppress lateral and background noise.

Both microphones operate according to the pressure gradient/line transducer technique. A switchable low frequency roll-off eliminates unwanted low frequencies at a cut-off frequency of 90 Hz. An integrated footfall sound insulation avoids the transmission of noise below 40 Hz. To avoid wind noise when used outdoors, a wind shield must be used.

Both microphones can be operated with a phantom power supply of 11 - 52 V.
